Hoster-JP Provides Medical Image Transfer System Between Russia And Japan for a Government Project

TOKYO -- Hoster-JP (HJP) and Public Interest Incorporated Foundation International Foundation for Oral Care (IFOC) have started providing medical image data transfer system (MDTS) for a government-driven project called "Medical Center Project with Japan's Expertise". This system is supposed to be used between hospitals in Japan and in Moscow, Russia.

The "Medical Center Project with Japan's Expertise" is one of the projects for internationalization of Japanese high-tech medication, driven by Ministry of Economy, Trade and Industry (METI). The project aims to get Japan's high level medical expertise (such as endoscopic surgery, image diagnosis) widely used through dispatch of Japanese doctors to the partner medical institutions in Moscow. The project also introduces cutting-edge medical services overseas, and does business feasibility researches on accepting patients from the world to Japan. The term of the project is until February 29th, 2012.

The objectives of providing MDTS are:

1. to verify the benefits for remote medical diagnosis
2. to find out system needs for more useful operations

The advantages of our MDTS are as follows:

1. fast transmission speed for uploading and downloading medical image data
2. multi-point connection available among multiple hospitals in Japan and Russia
3. secure data transfer and secure data store

The medical data transfer between Russia and Japan is supposed to be automatically done by the transfer servers at datacenters located both in Russia and Japan. This enables us to make the transfer speed of upload and download about ten times to twenty times higher than that with a server located in one side of the countries. In addition, the medical data stored by MDTS is to be encrypted and transferred, which avoids data theft. The data will also be saved securely in the servers at the datacenters through a designated time period.

Starting off with MDTS, HJP intends to expand our IT infrastructure services with tailor-made cloud computing system worldwide, in the pursuit of supporting our customers' global

businesses.

About IFOC

President: Kan-ichi Seto

Office: Grand Maison Mita 206, 20-7, 5-Chome, Shiba, Minato-ku, Tokyo

Established: January, 2009

Authorized by the Government: April, 2010 (as Public Interest Incorporated Foundation)

Corporate Objective:

To nurture people of ambition and talent having skills of high-tech and R&D of oral medication, and to contribute to the development of oral medication in Japan and other countries in Asia, through interaction with Asia, Europe, and North America. Especially to pursue the medical improvement and prevention in the field of oral cancer, which is more common in Asian region.

About Hoster-JP

Chief Executive Officer: Masaaki Yamanaka

Office: 3F Byune Honkomagome, 6-5-3, Honkomagome, Bunkyo-ku, Tokyo

Established: September, 2006

Line of Business: ICT platform services covering worldwide
